Education

SRM Institute Of Science and Technology

Bachelors of Technology in Computer Science CGPA - 9.33

06/2025

Ghaziabad, Uttar Pradesh

Experience

System Engineer

08/2025 - Present

Infosys

- Implemented CQRS-based architecture to automate TV authoring workflows, contributing to 36% reduction in process time and improving system scalability.
- Developed vector embedding pipelines stored in Delta tables for Generative AI integration, contributing to systems used in EASA-aligned safety review workflows and enabling faster content generation.
- Processing complex nested schemas with validation and transformation logic, improving data processing efficiency by 25–30%.

System Engineer Intern

01/2025 - 06/2025

Infosys

- Delivered a React-based customizable mailing system with reusable JSX templates and an interactive design toolbar.
- Designed 5+ responsive email templates and contributed to frontend architecture through modular, component-based design.
- Secured user login using JWT-based authentication in Node.js backend, enforcing role-based access control for APIs.

Machine Learning Intern

07/2024 - 12/2024

Ravvio Labs

- Analyzed 8 advanced text summarization techniques using Active & Rejection Learning for noise reduction.
- Achieved 38% performance improvement in encoder-decoder architecture using Learning Rate Scheduling, Batch Size Optimization, Regularization, Distillation, Optimizer Tuning.

Skills Summary

Languages: Python, Java, JavaScript, C#

Web & Frameworks: Next.js, React.js, Express.js, Node.js, Tailwind CSS

Machine Learning & AI: Pandas, NumPy, Scikit-learn, TensorFlow, Transformers, Hugging Face, OpenCV, BeautifulSoup

Database: MongoDB, MySQL, PostgreSQL

Tools: Jupyter Notebook, Google Colab, Git, GitHub, Postman, VS Code, Figma

Projects

MestorAI – Product Feedback Intelligence Platform | Python, Streamlit, Pandas, Numpy, Langraph, altair, pydantic 05/2026

- Built a multi-agent LLM pipeline for semantic enrichment and categorization of large-scale user feedback, reducing manual triage effort by 70%
- Developed a Pandas-based analytics engine to compute multi-factor product health scores and detect sprint-level regressions with sub-second processing latency.
- Created an interactive Streamlit dashboard with a priority scoring system to translate risk signals into actionable insights, improving sprint planning efficiency by 40%.

FoodOptima – AI-Based Food Waste Reduction System | EfficientNetB0, OpenCV, T5, Deep Learning, Streamlit 🔄 12/2025

- Applied EfficientNetB0 and computer vision techniques to estimate food waste from post-meal images.
- Generated personalized recommendations using T5 Transformer, enabling real-time inference via Streamlit.

FinSpire: AI-Powered WebApp for Financial Recommendations | Python, Next.js, Transformer, HuggingFace, Chainlit 🔄 07/2024

- Trained and fine-tuned a T5 Transformer model on 68K records for NLP-based financial recommendations.
- Integrated TradingView API and REST services for real-time data visualization and user insights.

HackSuraksha - Fraudulent Website detection system | Python, BeautifulSoup, Streamlit, Hugging Face 🔄 01/2024

- Built deep learning models (CNN, LSTM) for URL and ad-content fraud detection, achieving 96.8% accuracy.
- Provisioned ML pipelines using Streamlit and Hugging Face, reducing inference latency by 35%.

Certifications

- Infosys Certified React Associate (04/2025)
- Foundation of Cloud IoT Edge ML (NPTEL) (04/2024)
- Deep Learning (NPTEL) (09/2023)
- API Development using Node and Express (03/2025)

Contribution and Achievements

- Published 3 IEEE research papers spanning NLP text summarization, UAV network routing performance, & machine learning applications in healthcare analytics. (10/2025)
- Winner – HACKINDIA SPARK-2: Created Web3 cloud gaming dApp on Base Blockchain. (08/2024)
- Google & AMD – Solving for India Finalist: Designed 20+ celeb-inspired health tracking app. (09/2023)
- Smart India Hackathon Qualifier: Developed regional translator app with 8+ regional languages. (08/2023)
